github.com/910862KUMAR

Professional Summary

Java Full Stack Developer with hands-on experience in building enterprise web applications using Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, REST APIs, and React. Strong foundation in Object-Oriented Programming, layered architecture, and scalable backend development with a passion for building clean, production-ready software.

Education

Presidency University, Bengaluru	2023 – 2026
B.E. in Information Science and Engineering	CGPA: 7.22
CIT, Tumakuru	2019 – 2022
Diploma in Civil Engineering	64.4%
Shubhodaya English Medium School, Gubbi	2018 – 2019
SSLC	85.12%

Technical Skills

- **Programming Languages:** Java, SQL, Python
- **Computer Fundamentals:** DSA, OOP, DBMS, Operating Systems, Computer Networks
- **Backend:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs
- **Frontend:** React.js, HTML5, CSS3, Tailwind CSS
- **Databases:** PostgreSQL, MySQL
- **Tools:** Git, Maven, Docker, Swagger/OpenAPI, Postman
- **System Design:** SOLID Principles, Layered Architecture, Design Patterns, Microservices (Learning)
- **AI/ML & GenAI:** Machine Learning, Scikit-learn, FastAPI, LLMs, RAG, LangChain

Projects

HealthSphere AI — Enterprise Healthcare Management System 2026

Java 21 — Spring Boot — Spring Data JPA — Hibernate — PostgreSQL — REST APIs — Swagger

- Developed an enterprise Healthcare Management System using Java 21, Spring Boot, Hibernate, and PostgreSQL following layered architecture (Controller, Service, Repository, DTO, Entity).
- Built RESTful CRUD APIs for Patient, Doctor, and Appointment modules with request validation, global exception handling, and Swagger API documentation.
- Designed relational database models using JPA/Hibernate with @OneToMany and @ManyToOne entity relationships.
- Applied DTO, Repository, and Service design patterns to build scalable, maintainable, and production-ready backend services.

FraudShield AI — Enterprise Fraud Detection Platform 2026

FastAPI — React — Random Forest — SQLAlchemy — PostgreSQL — Docker

- Developed an AI-powered fraud detection platform using FastAPI, React, and Machine Learning to detect fraudulent financial transactions.
- Built secure JWT-based authentication and REST APIs for user registration, login, and real-time fraud prediction.
- Integrated a Random Forest model with SQLAlchemy and PostgreSQL to store prediction history and support scalable backend operations.
- Containerized the application using Docker and designed a production-ready, enterprise-grade architecture.

Certifications

- Tata Data Analytics Job Simulation — Forage
- SQL (Basic) — HackerRank
- Python for Beginners — Simplilearn
- Data Analytics — Simplilearn
- Microsoft Excel — Coursera

Languages
